# Retention Solutions

Prevent your devices' cables from accidentally unplugging

Even when inserted correctly into the power distribution unit (PDU), device power cables can become dislodged due to user error or vibration over time. Server Technology offers multiple solutions that data center managers can deploy to firmly secure power cables to the outlets on a PDU to provide peace of mind.

EZip

EZip is equipped with High Retention outlets. Due to the significantly improved native holding force of the outlets, we are no longer including secondary retention devices with the product as we have in the past. In addtion, we have developed a new secondary retention system, EZip, replacing previous Cable Rentention Clips.

The EZip system is sold in bundles. Orders may be placed through your Sales Representative.
